surgeries

THE PROCEDURE

All autologous bone marrow-derived intrathecal + intravenous stem cell transplantations are performed as single procedures in an operating room with sterile air flow and include the following steps:

1

Sedoanalgesia with appropriate monitoring

2

Bone marrow aspiration from the anterior and posterior iliac crest (hip bone)

3

Centrifugation of the bone marrow aspirate to obtain a stem cell concentrate

4

Intrathecal administration via lumbar puncture-Routine drawing of cerebral spinal fluid (CSF) samples

5

Standard postoperative care at home (i.e., day cases; no overnight admissions are required!)

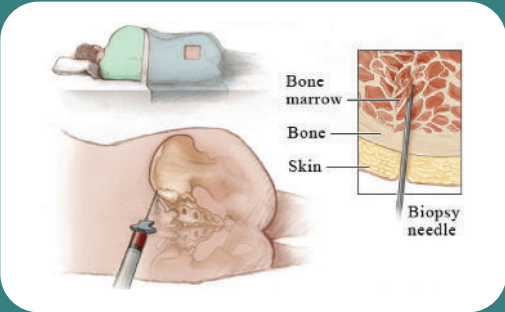

Single procedure

is the legal term that means that cells are obtained, processed, and used within one person and in the same procedure.

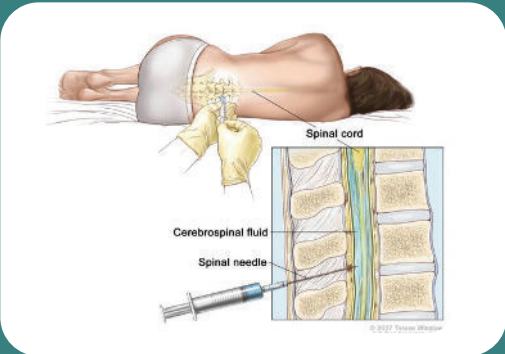

Autologous

means the removal of cells or tissues and their subsequent implantation into the same person. The donor and recipient are identical.

Aspiration

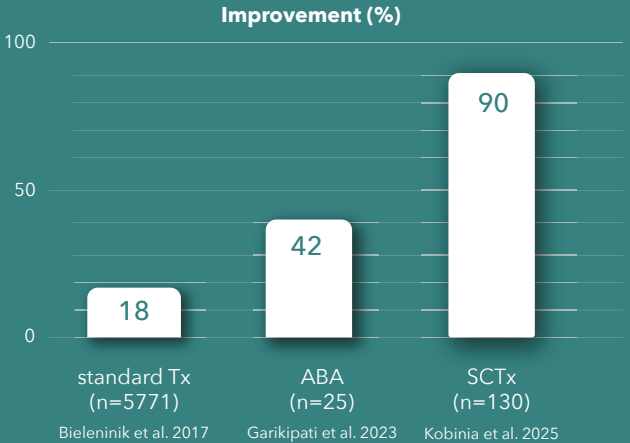

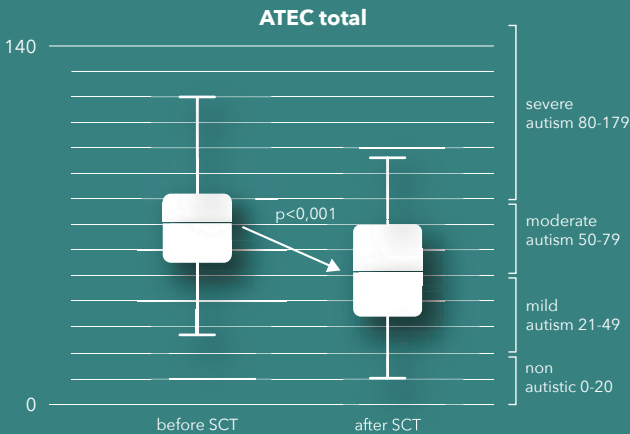

Administration

SAFETY & EFFICACY

No serious adverse events

WHY CHOOSE KOBINIA MED?

Advanced Stem Cell Treatment:

Using your own stem cells to treat diseases.

Our Doctors:

Experienced surgeons and specialists provide medical care.

High Quality:

Treatments are regularly checked for the highest standards.

Recognized Worldwide:

We do research and publish in scientific journals

Great Location and Fair Prices:

Located in Vienna, central Europe, with competitive pricing.
